Enlightdata.ai

REAL-WORLD POV DATA · EUROPE & NORTH AMERICA

Skilled work, seen through the worker's eyes.

We broker first-person video from the helmet cams and bodycams of highly skilled field workers across Europe and North America — licensed to the teams building physical AI.

Helmet cams & bodycams
First-person footage, worn on the job.

Highly skilled work
Maintenance, repair, checks, inspections.

Europe & North America
Captured where the infrastructure is.

Rights-cleared
Consent and a licence for every clip.

02 / THE GAP

AI has watched people cook. It hasn't watched them fix a railway.

Physical AI learns hands-on skills from first-person video. Most of that video shows everyday life. The skilled work that keeps infrastructure running is barely on camera.

Demand is rising

Robotics and physical-AI teams need first-person video of real work to learn from.

Supply is locked away

Skilled field work happens on live sites, behind safety rules, permits and contracts.

It can't be staged

Nobody can rebuild a rail yard, a sewer or a substation in a studio.

WHERE FIRST-PERSON FOOTAGE EXISTS TODAY — QUALITATIVE

Homes & kitchens	PLENTY
Hobbies & sport	PLENTY
Factories & warehouses	GROWING
Field infrastructure	SCARCE

OUR FOCUS

03 / WHAT WE BROKER

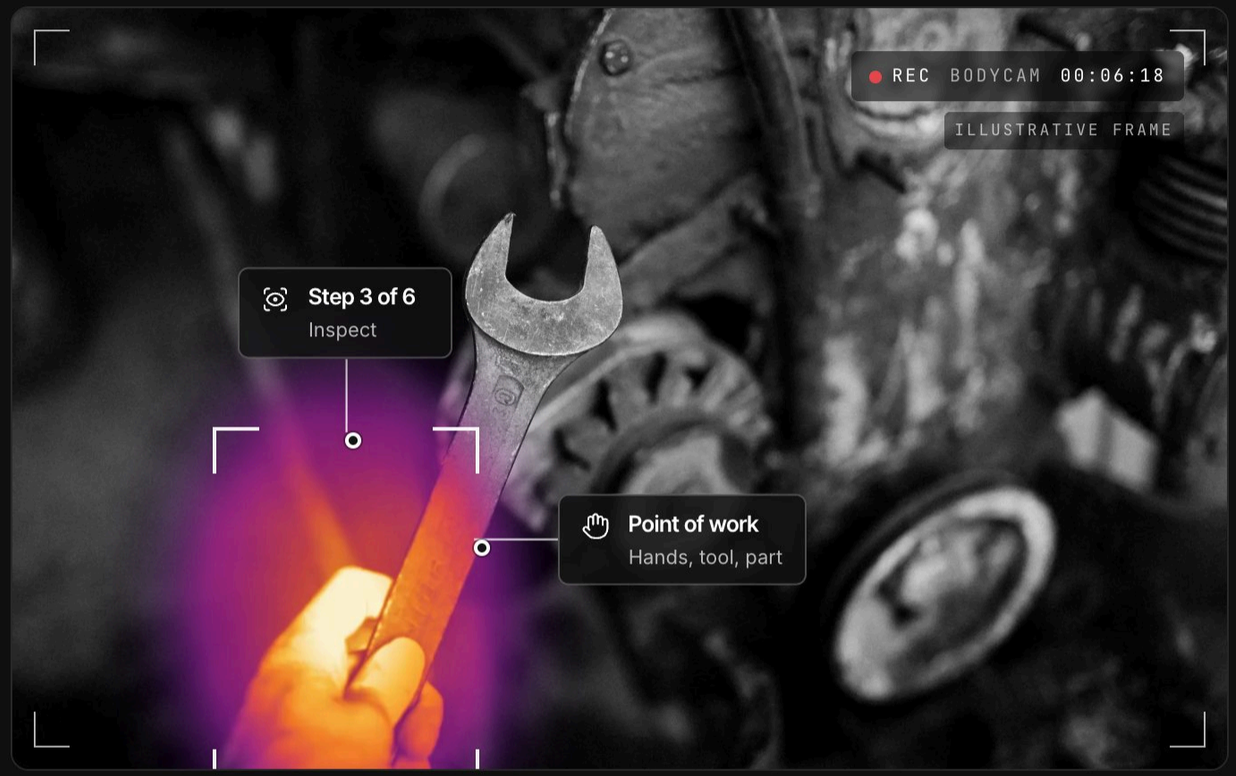

First-person footage of real, skilled jobs.

Real crews on real sites, filmed from their own point of view — then cleared, cleaned and labelled for licensing.

Helmet cams · Bodycams · Smart glasses

EVERY DATASET INCLUDES

- First-person video of the whole job, start to finish
- The worker's own commentary, when they give it
- Labels: trade, task, steps, tools, equipment, country
- Consent and a licence for every clip
- Faces, names and number plates blurred

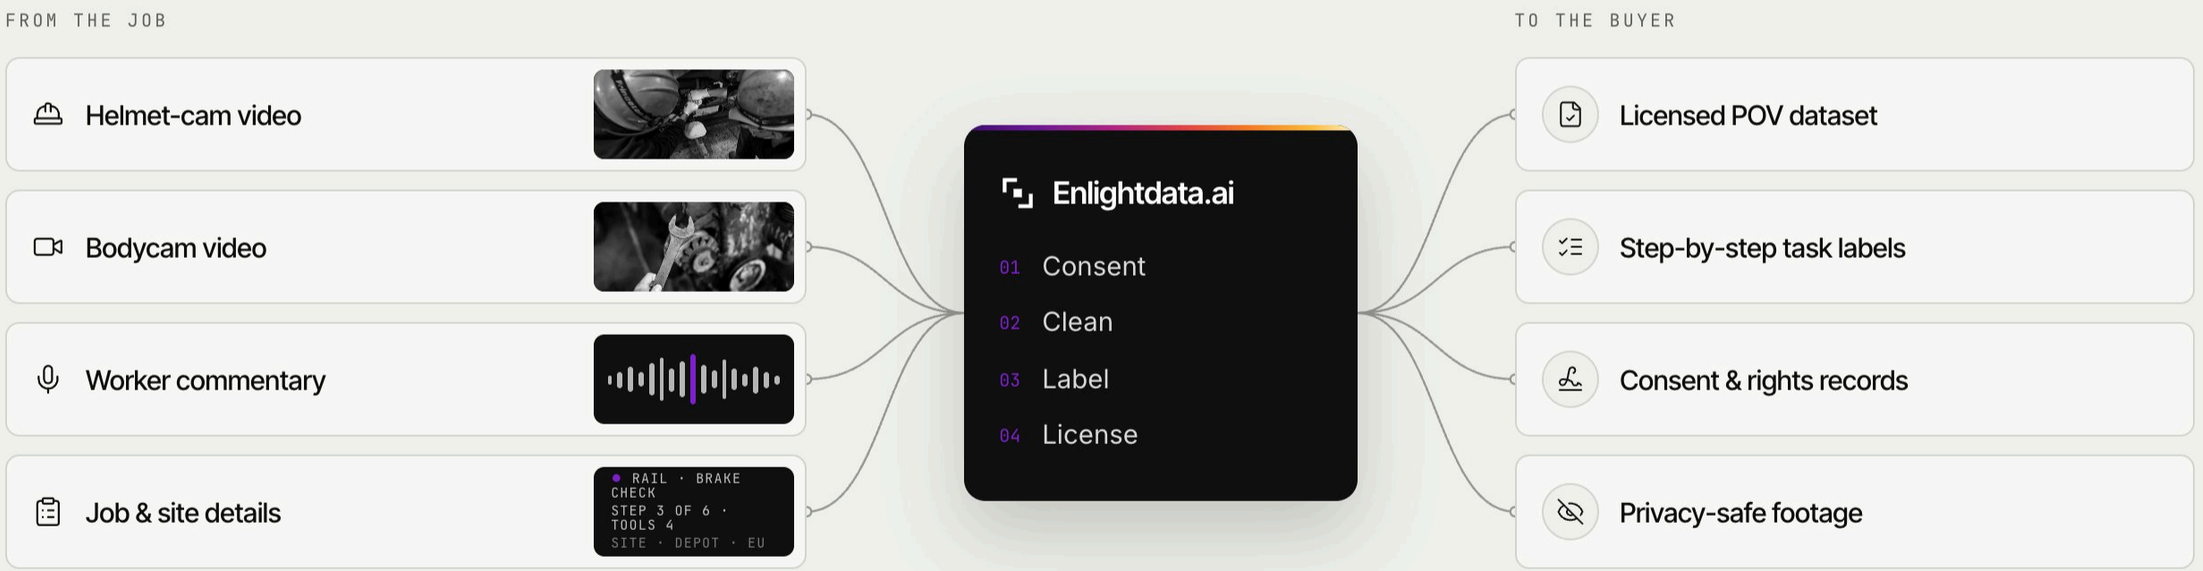

01 Brief · 02 Isolate · **03 Inspect** · 04 Repair · 05 Test · 06 Sign off

— Not fixed cameras — that's our sister company, Enlightlayer.com
— Not studio shoots
— Not consumer data

04 / INSIDE THE DATA

Raw footage in. Licensed, labelled data out.

Crews film normal jobs. We turn what they film into data AI teams can buy.

What we are: A broker. We find, clear and prepare footage — we don't build AI models, run fixed cameras or trade consumer data.

05 / EXAMPLE CAPTURE

What one job looks like as data.

ILLUSTRATIVE

CLIP RECORD

Trade	Rail · track maintenance
Task	Gauge and fastening check
Steps	6, each labelled
Cameras	Helmet cam, whole crew
Commentary	Worker's own words
Site	Open line · Switzerland
Rights	Company contract · worker consent
Privacy	Faces and names blurred

WATER · PUMP STATION · USA

Overhauling a water pump

Bodycams · Step labels

GRID · LINE WORK · USA

Lineworker training at height

Helmet cam · Training site

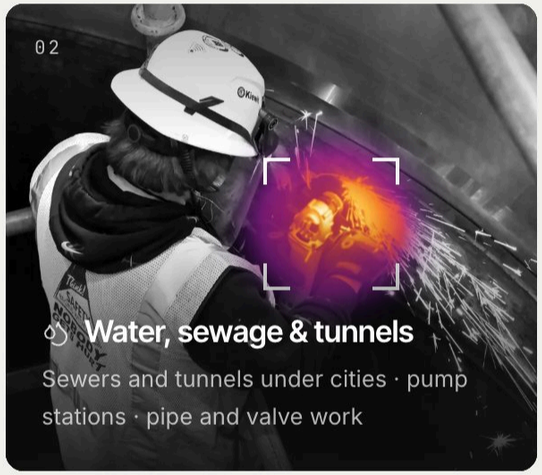

06 / SEVEN FIELDS

Seven fields. Rail first.

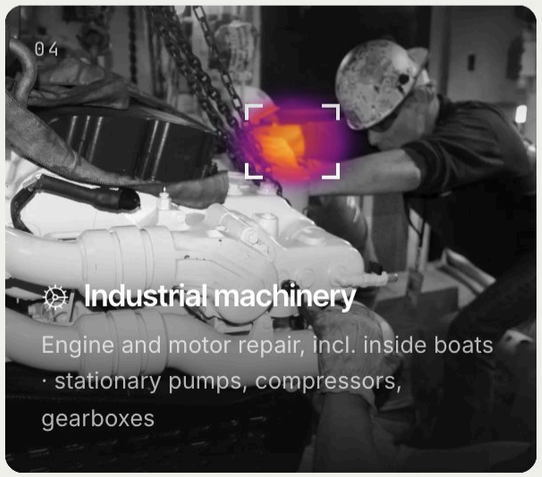

Broad, complex, hands-on work that is never the same twice.

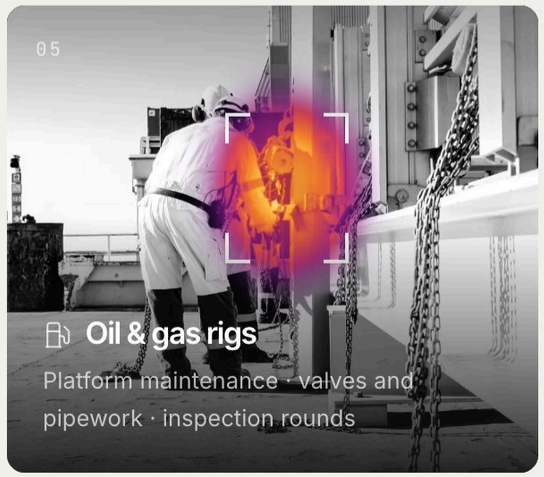

Maintenance · Repair · Checks · Inspections

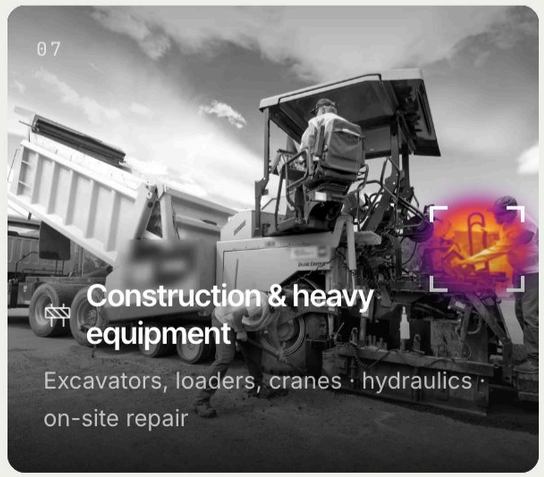

07 / WHY SKILLED WORK

Simple tasks will be filmed everywhere. Skilled field work can't be.

Repeatable tasks

— Same station, same motion, all day

— Easy to film in high volume

— Already being captured at scale — often in lower-cost regions

Skilled field work

- Different every time — equipment age, make, rulebook, weather, access
- Done by certified crews on live infrastructure
- Shaped by European and North American equipment and rules — so the footage has to come from here

ONE JOB, MANY VERSIONS — ILLUSTRATIVE

Brake inspection
1 task

× **4** equipment generations

× **5** manufacturers

× **2** rulebooks · EU / NA

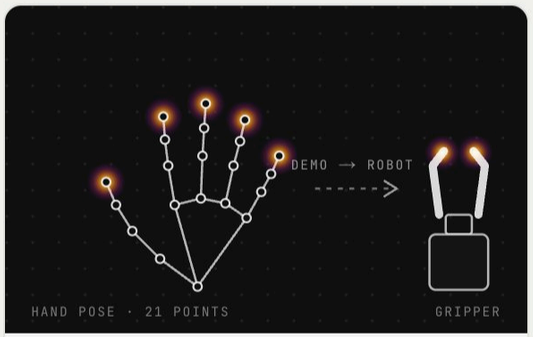

× **4** conditions · day, night, cold, wet

= **160** different jobs to learn

08 / USE CASES

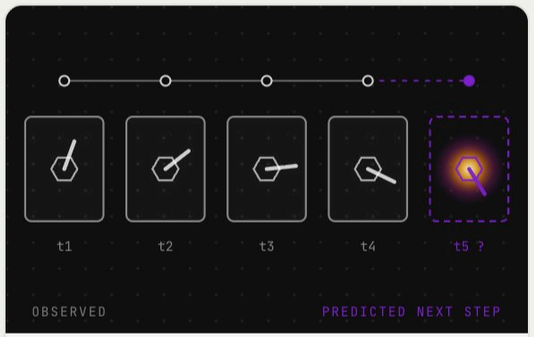

What AI teams build with skilled POV footage.

First-person video of expert work teaches machines how real jobs are done.

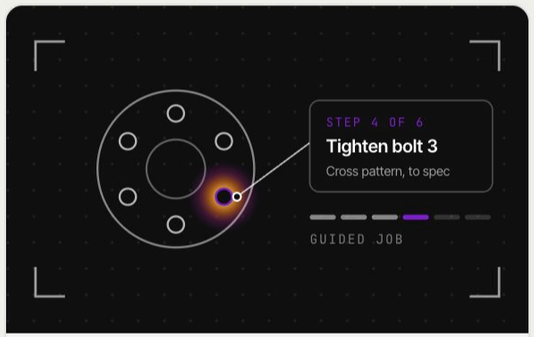

Robot learning

Teach robots to handle tools and parts from expert demonstrations.

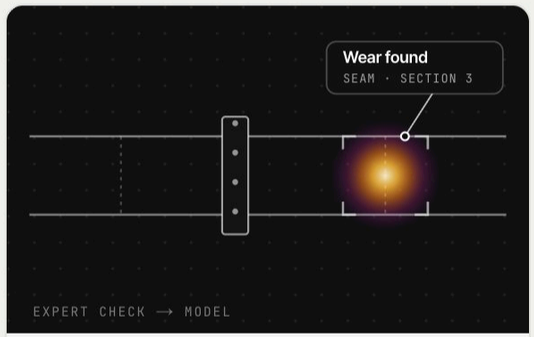

World models

Learn how real work unfolds, step by step, in real conditions.

Work assistants

AI and AR copilots that guide technicians through a job.

Inspection AI

Spot wear, leaks and damage the way experienced crews do.

TYPICAL BUYERS

- Robotics & humanoid companies
- Physical-AI labs
- World-model teams
- AI training-data brokers
- Industrial AI vendors

Enlightdata.ai

09 / OUR ROLE

We're the middlemen.

We connect the companies whose crews do the work with the teams that need to see it.

Field companies

Rail operators, utilities, shipyards, contractors

THEY GET

Income from work they already do — or their own data, set up with specialists.

FOOTAGE + CONSENT →

← REVENUE SHARE

Enlightdata.ai

01 Find the crews
02 Agree the rights
03 Guide the capture
04 Check and clean
05 License the footage

LICENSED DATASETS →

← LICENCE FEES

AI teams & AI training-data brokers

Robotics and physical-AI teams, world-model builders, data brokers

THEY GET

Real-world footage they can't film themselves — bought, leased or sourced to order.

HOW WE EARN

Brokerage fee
A share of every licence we place.

Capture programmes
Fees for setting up and running recurring capture.

Repeat orders
Equipment and tasks keep changing — buyers keep needing fresh footage.

10 / WAYS TO WORK WITH US

Two sides. Three ways in.

Field companies

Rail operators, utilities, shipyards, contractors

01 **License your footage**

Earn from work your crews already do. We handle buyers, contracts and quality.

02 **Build your own data asset**

Keep the footage in-house — we connect you with specialists to organise, store and use it.

03 **Hybrid**

Keep what's sensitive in-house and license the rest.

AI teams & data brokers

Robotics and physical-AI teams, world-model builders, AI training-data brokers

01 **Buy or lease datasets**

Licensed footage by trade, task and region.

02 **Source to order**

Name the job — we find the crews and run the capture.

03 **Advise field companies**

Brokers help companies organise, store and grow their data — we make the introductions.

11 / HOW A DEAL WORKS

From job site to dataset in five steps.

Normal jobs, filmed by the people doing them. Nothing is staged.

01

Match

A buyer names a trade, task and region. We find crews who do that work.

02

Agree

A company contract and worker consent: who owns what, who may use it, for how long.

03

Capture

Crews wear helmet cams or bodycams on normal jobs. Safety rules always come first.

04

Check

We review quality, blur faces and names, and label each step of the task.

05

License

The buyer gets the footage under clear terms. The company gets paid.

12 / RIGHTS FIRST

Built for Europe's and North America's rules.

Here, footage without consent and a licence can't be used. Clearing the rights is the product.

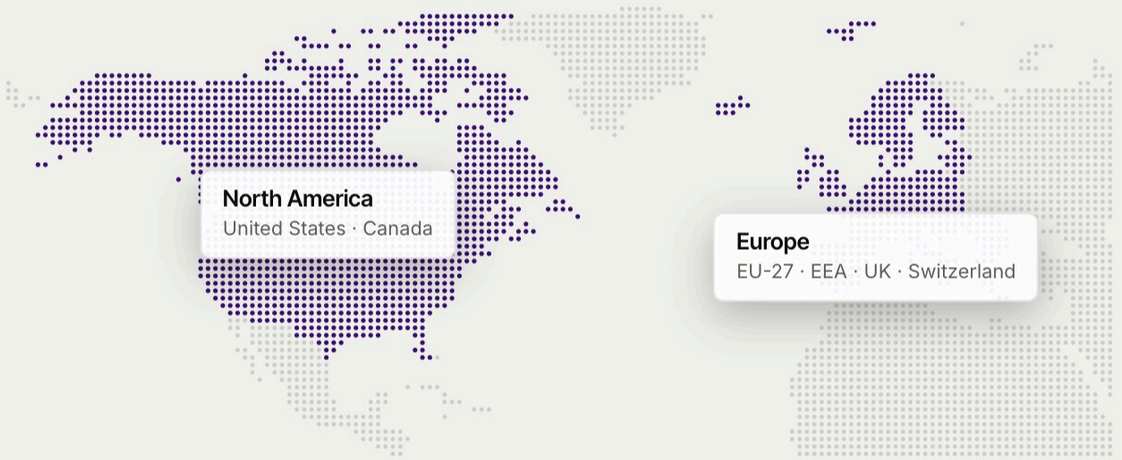

Consent from every worker. Every worker agrees before anything is filmed.

A contract with every company. Clear terms for ownership, use and revenue.

Private by default. Faces, names and number plates blurred before delivery.

Safety first. The camera never changes how the job is done.

Clear licences. What the buyer may do, where, and for how long.

13 / LET'S TALK

Real-world POV data of skilled work. Brokered.

Enlightdata.ai connects skilled field crews with the teams building physical AI — across Europe and North America.
